

A Live & Dried Blood Analysis is a *window into your health*. It will help you *see the effect your nutrition has on your cells* and discover how the choices you make each day affect your overall health and well-being.

Live Blood Nutritional Assessment

Microscopy is an important holistic instrument. It gives information about the terrain of the body. By monitoring the nutritional condition of your blood, a Certified Microscopist can assist you in “balancing” your system by giving you nutritional and lifestyle recommendations that, when observed can enhance your overall health.

Improper nutrition is the number one cause of sickness and disease. If corrected before the onset of symptoms better health can be achieved.

A Live Blood Nutritional Assessment is for educational purposes to help you:

- Discover how the choices you make each day affect your overall health and well-being.
- See the **effect** certain foods, drinks, and environmental toxins have on your body and blood.
- To **detect** and **prevent** underlying sickness and disease.
- To learn **how** to take responsibility for your health.
- To **balance** your system by giving it the nutrition it needs from 100% Pure Plant Based Whole Foods.

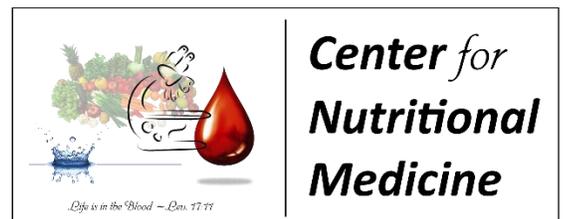

Every client will receive careful assessment and individual education. In order to accomplish this goal, after your Intake Evaluation, we recommend four visits, consisting of your initial, re-tests (each month for 120 days) and final follow-up.

Nutritional Live Blood Assessment is intended for EDUCATIONAL and nutritional information only and is NOT to be considered medical advice. Please understand that we are NOT diagnosing, prescribing or treating for any disease or health condition.

“Life is in the blood.” – Leviticus 17:11

“Food for the Body & Soul – ‘In one drop of blood, there are 5,000,000 living cells bringing life to our body. When we contaminate this blood through what we *eat, drink, or breathe* we bring disease and death to our **body!** Our **spirit** and **soul** are affected through what we *think, say, and do*. It is all about our *choices* – and the result is *life or death.*’” -Dr. Sandy Corlett, ND, PscD

“Every tissue in the body is fed by the bloodstream, which is supplied by the bowel. When the bowel is dirty the blood is dirty and so are the organs and tissues. It must be the bowel that is cared for first.” -Bernard Jensen, MD

Come... See the effect nutrition has on your cells and overall health!
